

## **July's Tip**

Preventative maintenance is the key to keeping your RV in good running condition. Your RV needs to get the same attention as your car, from oil and filter changes, wipers replaced and battery checks to name a few.

Roof inspections, window inspections and exterior lights are the biggest culprits when it comes to water intrusion, which leads to buckled walls and sagging ceiling panels, soft and rotting floors and even mold, which can cause serious health problems.

When you bring your RV to Brightside RV Center a free safety and condition check will be performed updating you on what service your RV may need. We can handle any necessary repairs or if you prefer to do it yourself our parts store is stocked with most everything needed to complete the job.
